

Declaration of the Use of Generative Artificial Intelligence (GAI)

– valid version from 1 APRIL 2026

Declaration for the use of generative AI tools

☒ I/we have NOT used generative AI in the preparation of this assignment (<i>tick the box</i>).							
☐ I/we have used generative AI in the preparation of this assignment (<i>tick the box</i>). <i>List which generative AI tools have been used (remember to include the version).</i>							
I/we have used generative AI tools in the following way – <i>a list of possible uses is attached for inspiration.</i> <table border="1"> <thead> <tr> <th>EXAMPLES OF USE</th> </tr> </thead> <tbody> <tr> <td> ☐ Text generation and paraphrasing <i>In academic contexts, generative AI is not perceived as an authoritative source. It is therefore not recommended to use generative AI to generate finished text for academic assignments, unless the assignment requires it (e.g. assignments dealing with generative AI or prompt engineering).</i> <i>If you nevertheless insert text generated by generative AI into your assignment, it must be clearly declared:</i> <i>If you insert passages generated by generative AI directly into the assignment, they must be cited as a citation, and you must cite that generative AI on the list of references.</i> <i>Note: this also applies if you have used AI-generated notes that are included in the assignment.</i> <i>If you insert passages in which you have paraphrased generative AI output, or if you insert passages in which generative AI has paraphrased the original text, you must cite generative AI.</i> <i>Read more about citation of generative AI here (in Danish).</i> </td> </tr> <tr> <td> ☐ Structure <i>Generative AI has helped organise chapters and sections or other elements of the assignment.</i> </td> </tr> <tr> <td> ☐ Summarising large amounts of information <i>Generative AI has condensed large data sets.</i> <i>Document, using source references in the reference list, which original data have been summarised.</i> </td> </tr> <tr> <td> ☐ Analysis and/or interpretation of data, literature, theories, etc. <i>Generative AI has performed analyses and interpretations that are included in your assignment.</i> <i>Document, using source references in the reference list, which data have been analysed and/or interpreted.</i> </td> </tr> <tr> <td> ☐ Brainstorming and idea generation <i>Generative AI has helped generate new ideas and perspectives.</i> </td> </tr> <tr> <td> ☐ Source and literature search <i>Generative AI was used to support your assignment, e.g. by identifying relevant sources, literature and materials.</i> </td> </tr> </tbody> </table>	EXAMPLES OF USE	☐ Text generation and paraphrasing <i>In academic contexts, generative AI is not perceived as an authoritative source. It is therefore not recommended to use generative AI to generate finished text for academic assignments, unless the assignment requires it (e.g. assignments dealing with generative AI or prompt engineering).</i> <i>If you nevertheless insert text generated by generative AI into your assignment, it must be clearly declared:</i> <i>If you insert passages generated by generative AI directly into the assignment, they must be cited as a citation, and you must cite that generative AI on the list of references.</i> <i>Note: this also applies if you have used AI-generated notes that are included in the assignment.</i> <i>If you insert passages in which you have paraphrased generative AI output, or if you insert passages in which generative AI has paraphrased the original text, you must cite generative AI.</i> <i>Read more about citation of generative AI here (in Danish).</i>	☐ Structure <i>Generative AI has helped organise chapters and sections or other elements of the assignment.</i>	☐ Summarising large amounts of information <i>Generative AI has condensed large data sets.</i> <i>Document, using source references in the reference list, which original data have been summarised.</i>	☐ Analysis and/or interpretation of data, literature, theories, etc. <i>Generative AI has performed analyses and interpretations that are included in your assignment.</i> <i>Document, using source references in the reference list, which data have been analysed and/or interpreted.</i>	☐ Brainstorming and idea generation <i>Generative AI has helped generate new ideas and perspectives.</i>	☐ Source and literature search <i>Generative AI was used to support your assignment, e.g. by identifying relevant sources, literature and materials.</i>
EXAMPLES OF USE							
☐ Text generation and paraphrasing <i>In academic contexts, generative AI is not perceived as an authoritative source. It is therefore not recommended to use generative AI to generate finished text for academic assignments, unless the assignment requires it (e.g. assignments dealing with generative AI or prompt engineering).</i> <i>If you nevertheless insert text generated by generative AI into your assignment, it must be clearly declared:</i> <i>If you insert passages generated by generative AI directly into the assignment, they must be cited as a citation, and you must cite that generative AI on the list of references.</i> <i>Note: this also applies if you have used AI-generated notes that are included in the assignment.</i> <i>If you insert passages in which you have paraphrased generative AI output, or if you insert passages in which generative AI has paraphrased the original text, you must cite generative AI.</i> <i>Read more about citation of generative AI here (in Danish).</i>							
☐ Structure <i>Generative AI has helped organise chapters and sections or other elements of the assignment.</i>							
☐ Summarising large amounts of information <i>Generative AI has condensed large data sets.</i> <i>Document, using source references in the reference list, which original data have been summarised.</i>							
☐ Analysis and/or interpretation of data, literature, theories, etc. <i>Generative AI has performed analyses and interpretations that are included in your assignment.</i> <i>Document, using source references in the reference list, which data have been analysed and/or interpreted.</i>							
☐ Brainstorming and idea generation <i>Generative AI has helped generate new ideas and perspectives.</i>							
☐ Source and literature search <i>Generative AI was used to support your assignment, e.g. by identifying relevant sources, literature and materials.</i>							

☐ Language proofreading or linguistic feedback

Generative AI has been used for proofreading (grammar, spelling and punctuation).

Generative AI has contributed to the linguistic presentation of your assignment (e.g. correct use of subject-specific terminology, phrasing, language adjustments, language feedback, translation, etc.).

☐ Generating images, maps, tables, audio, video, etc.

☐ Programming

Generative AI was used to work with programming.

☐ Other use (please specify which):

For each selected item, briefly explain how you have used the responses generated by the AI.

Describe, for example, how the information was generated, and explain how the output was used in your assignment.

Describe how you have critically assessed the responses provided by the AI.
